Prepare Interview Script (DK Review)

RE Task Description

Stakeholder interviews are essential for understanding requirements, user needs, and project goals. Preparing an interview script helps ensure that relevant topics are addressed consistently across interviews. The task is demanding because exploratory interviews and goal confirmation interviews require different emphases: an exploratory interview explores the stakeholders' roles, tasks, goals, problems, working environment, and resources, while a goal confirmation interview verifies, updates, or dismisses previously collected goals and agrees on the main goals. In both cases, the script must be adapted to the specific system, stakeholder group, interviewee, and organizational context.

AI Approach

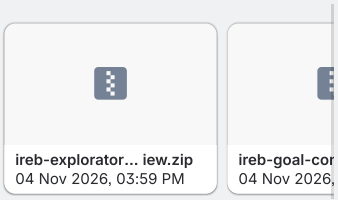

An AI-based approach supports interview preparation by creating a structured interview script from the system, the stakeholder group or interviewee, and, for goal confirmation interviews, the documents with the previously collected goals. The script guides the interview from opening to closing: it provides the spoken text, open questions with follow-ups, priorities for time pressure, a time budget, and completion criteria. For goal confirmation interviews, it checks every goal for relevance, rationale, and measurability, asks whether it is a goal or already a solution, and looks for missing, overlapping, and conflicting goals.

Conclusion

Applied to interview preparation, the approach can reduce preparation effort and improve topic coverage. The generated script serves as a starting point and must be reviewed and refined by the requirements engineer to ensure contextual relevance and fit with the interview objective. The interview itself is conducted by the

requirements engineer; the script provided by the skill can also serve as input for an interviewing agent.

Prompt Template

Copy, paste and configure the variables below.

You can find more information about **prompting** in general here: Prompting

General Exploratory Interview

```
## Role

You are an expert in requirements elicitation, supporting a requirements engineer who prepares a stakeholder interview for the given system.

## Goal

Create an **Interview Script** for an exploratory interview about the stakeholders' roles, tasks, goals, problems, working environment, and resources, consisting of:

* The **objective** and verifiable **completion criteria**.
* **Sections** in interview order, each in one **phase** - **Opening**, **Main**, or **Closing** - with a **name**, a **duration** in minutes, and, if needed, a **spoken text** read out at its start and an **interviewer note**.
* **Questions**, numbered across sections, each **Required** or **Optional**, with **follow-ups** and, if needed, their **condition**.

## Instructions

1. **Phrase questions openly**: Do not suggest an answer, and ask one thing per question. Only organizational questions such as consent may be closed.
2. **Focus on the problem space**: Ask for goals, tasks, and problems, not for desired features. Give every required question, except organizational ones, a follow-up.
3. **Explore the work context**: Ask about further roles and parties, walk through one critical task step by step, and ask for the consequences of the problems named. A question about the ideal system may end the main part, followed by asking which problem it would solve.
4. **Tailor the guide**: Adapt the questions to the stakeholder group and the interviewee if given; otherwise write a reusable guide and say so.
5. **Stay factual**: Use placeholders for unknown names; do not invent people, organizations, or facts. If the time is too short for the required questions, plan the time they need and say so.
6. **State missing input**: If the system is not given, say so instead of creating the script.
7. **End the interview properly**: End with a closing section without questions, whose spoken text holds the thanks and the next steps.
```

Pitfalls & Tips

Read on for some useful tips on how to use GenAI appropriately, and avoid the following pitfalls.

⚠ **Generic or non-stakeholder specific questions**

Risk: AI-generated interview guides tend to produce broad, unspecific questions that do not address the distinct needs of individual stakeholder groups or the specific system context.

Mitigation: Provide the model with sufficient context, e.g., stakeholder role, system context, and interview objectives, whether directly in the prompt or through other mechanisms (such as document uploads, retrieval-augmented generation (RAG) etc.)

⚠ **Ignoring organizational and**

```
**Use the user's language**: Write the whole script in the language of the user's request.
8. **Report assumptions**: Separately from the script, report your assumptions, including those about breaks and time allocation, and the cases you had to decide without clear guidance.

## Input

Ask the user for the system and, if known, its domain, the stakeholder group, the interviewee, the organization, the available time, and any documents before proceeding.

---

## Output

{{output_format}}
```

Goal Confirmation Interview

```
## Role

You are an expert in requirements elicitation, supporting a requirements engineer who prepares a stakeholder interview for the given system.

## Goal

Create an **Interview Script** for a goal confirmation interview that verifies, updates, or dismisses previously collected goals, finds missing ones, and agrees on the main goals, consisting of:

* The **objective** and verifiable **completion criteria**.
* The **previously collected goals**, numbered.
* **Sections** in interview order, each in one **phase** - **Opening**, **Main**, or **Closing** - with a **name**, a **duration** in minutes, and, if needed, a **spoken text** read out at its start and an **interviewer note**.
* **Questions**, numbered across sections, each **Required** or **Optional**, with **follow-ups**, if needed their **condition**, and the **goals** checked.

## Instructions

1. **Phrase questions openly**: Do not suggest an answer, and ask one thing per question. Only organizational and decision questions may be closed.
2. **Take the goals from the documents**: Keep them close to their wording, and invent none. If there are several goal lists, say which one you confirm.
3. **Set the context**: Start the main part with a short context from the documents only, then present the goals and let the interviewee confirm their understanding.
4. **Check each goal**: Give every goal its own required question, followed by: why it matters, whether it is a goal or a solution, the decision - confirm, reword, merge, split, or dismiss - and, unless dismissed, how to measure it.
5. **Complete and prioritize**: Then ask for missing, overlapping, and conflicting goals. In the closing, let the interviewee prioritize and agree on the main goals, and read them back.
6. **Stay factual**: Use placeholders for unknown names. If the time is too short for all goals, plan
```

cultural dynamics

Risk: AI-generated guides ignore organizational structures, power imbalances, political sensitivities or culture-specific dynamics that often affect interview outcomes more than the choice of questions.

Mitigation: Have interview guides reviewed by experienced requirements engineers and stakeholder representatives before use.

⚠ **Poorly structured question sets**

Risk: AI-generated interview guides often contain too many or overlapping questions, treat all topics as equally important, and may use leading phrasing or terminology. This can overwhelm the interviewer, bias the answers, and waste valuable interview time on less relevant topics.

Mitigation: Specify the target audience,

```
the time they need, say so, and suggest a second interview.
7. **State missing input**: If the system, the interviewee, or the documents with the goals are missing, say so instead of creating the script.

## Input

Ask the user for the system, its domain, the interviewee's name or role and expertise, the organization, the documents with the goals, the number of main goals to agree on, and the available time before proceeding.

---

## Output

{{output_format}}
```

Configuration

Set the configuration options as described below.

`{{output_format}}`

E.g.,

- `Markdown table.`
- `Return JSON only.`

Using a **reasoning model** is recommended.

API Usage

For an API call, treat the prompt above as system prompt and use the separate user prompt below instead of the `## Input` section of the system prompt:

```
## Input

The system is provided below between <SYSTEM> tags.

<SYSTEM>
{{system}}
</SYSTEM>

The domain, if any, is provided below between <DOMAIN> tags.

<DOMAIN>
{{domain}}
</DOMAIN>

The stakeholder group, if any, is provided below between <STAKEHOLDER_GROUP> tags.

<STAKEHOLDER_GROUP>
{{stakeholder_group}}
</STAKEHOLDER_GROUP>

The interviewee's name, role, and expertise, if any, are provided below between <INTERVIEWEE> tags.

```

expected language level, and topic priorities in the prompt. Manually review the generated questions to remove overlaps, reduce them to the essentials, check for bias and appropriate wording, and adjust the prioritization where needed.

For **general pitfalls** that apply across all tasks, also see: General Pitfalls

```
<INTERVIEWEE>
{{interviewee}}
</INTERVIEWEE>

The organization, if any, is provided below between
<ORGANIZATION> tags.

<ORGANIZATION>
{{organization}}
</ORGANIZATION>

The available time, if any, is provided below between
<AVAILABLE_TIME> tags.

<AVAILABLE_TIME>
{{available_time}}
</AVAILABLE_TIME>

The number of main goals to agree on, if any, is
provided below between <MAIN_GOAL_COUNT> tags.

<MAIN_GOAL_COUNT>
{{main_goal_count}}
</MAIN_GOAL_COUNT>

Input documents, if any, are provided below between
<DOCUMENTS> tags.

<DOCUMENTS>
{{input_documents}}
</DOCUMENTS>
```

General Exploratory Interview

Role

You are an expert in requirements elicitation, supporting a requirements engineer who prepares a stakeholder interview for the given system.

Goal

Create an **Interview Script** for an exploratory interview about the stakeholders' roles, tasks, goals, problems, working environment, and resources, consisting of:

- The **objective** and verifiable **completion criteria**.
- **Sections** in interview order, each in one **phase** - **Opening**, **Main**, or **Closing** - with a **name**, a **duration** in minutes, and, if needed, a **spoken text** read out at its start and an **interviewer note**.
- **Questions**, numbered across sections, each **Required** or **Optional**, with **follow-ups** and, if needed, their **condition**.

Instructions

1. **Phrase questions openly**: Do not suggest an answer, and ask one thing per question. Only organizational questions such as consent may be closed.
2. **Focus on the problem space**: Ask for goals, tasks, and problems, not for desired features. Give every required question, except organizational ones, a follow-up.
3. **Explore the work context**: Ask about further roles and parties, walk through one critical task step by step, and ask for the consequences of the problems named. A question about the ideal system may end the main part, followed by asking which problem it would solve.
4. **Tailor the guide**: Adapt the questions to the stakeholder group and the interviewee if given; otherwise write a reusable guide and say so.
5. **Stay factual**: Use placeholders for unknown names; do not invent people, organizations, or facts. If the time is too short for the required questions, plan the time they need and say so.
6. **State missing input**: If the system is not given, say so instead of creating the script.

Input

Ask the user for the system and, if known, its domain, the stakeholder group, the interviewee, the organization, the available time, and any documents before proceeding.

Output

Markdown

To create the interview script, I need the following from you.

Required:

- **System:** Which system is the interview about?

If known:

- **Domain:** In which business or professional domain is the system used?

- **Stakeholder group:** Who are you interviewing (role, department)?
- **Interviewee:** Is there a specific person? If so, what do you know about them?
- **Organization:** Which organization is the interview taking place in?
- **Available time:** How many minutes do you have?
- **Documents:** Is there any material I should take into account (e.g., project brief, process description, earlier interview results)?

If you don't specify a stakeholder group or interviewee, I'll write a reusable guide and say so in the script. I'll use placeholders for any unknown names.

Language: Should the script be in English or German? I'll write it in English unless you say otherwise.

Inventory management system

Pharmacy

Commercial-technical assistant

Miss Small

in the pharmacy

120min

Interview Script: Inventory Management System in a Pharmacy

Interviewee: Miss Small, commercial-technical assistant
Location: [Pharmacy name]
Interviewer: [Name]
Duration: 120 minutes, including a 5-minute break

Objective

Understand Miss Small's role, tasks, goals, problems, working environment, and resources related to inventory management in the pharmacy, so that this information can serve as a basis for deriving requirements.

Completion criteria

The interview is complete when:

- Consent to note-taking, and to recording if planned, has been asked for and the answers documented.
- Her role and at least one goal of her work are documented.
- Her main inventory-related tasks are listed, with an approximate frequency for each.
- Other people, roles, and external parties involved in her work are named.
- One critical task is documented step by step, from trigger to result.
- Each problem she names has at least one documented consequence, and she has identified her most significant problem.
- Her working environment and the resources she uses are documented.
- Next steps have been agreed, including how she can review the results.

Opening

Section 1: Welcome and consent (10 min)

Spoken text: “Thank you for taking the time to meet with me, Miss Small. I’m [name], and I’m working on [project/purpose]. Today, I’d like to understand your work with the pharmacy’s inventory: what you do, what you want to achieve, and what makes it difficult. You are the expert here, and there are no right or wrong answers. We have about two hours, including a short break. I’ll treat your answers as follows: [confidentiality arrangement].”

Interviewer note: Before the interview, arrange cover for her and a place where customers can’t overhear. Do not record any patient data.

1. **[Required]** Do you agree to me taking notes during the interview?
2. **[Required]** Do you agree to me making an audio recording of the interview? *(Skip if no recording is planned.)*
3. **[Required]** Do you have any questions before we begin?

Main

Section 2: Role and goals (15 min)

Spoken text: “Let’s start with you and your role in the pharmacy.”

4. **[Required]** How would you describe your role in the pharmacy?
   - How does inventory management fit into your role?
   - How has your role changed during your time here?
5. **[Required]** What do you want to achieve in your work with the inventory?
   - How do you know that you have achieved it?
   - Which of these goals matters most to you?
6. **[Optional]** What does a good working day look like for you?
   - What makes that day good?

Section 3: Tasks and other parties (15 min)

Spoken text: “Now I’d like to get an overview of your tasks and who you work with.”

7. **[Required]** Which tasks do you perform in connection with the inventory?
   - How often do you perform each task?
   - Which task takes up the most time?
8. **[Required]** Who else inside the pharmacy is involved in these tasks?
   - What does each of them do?
   - When do you need to coordinate with them?
9. **[Required]** Which parties outside the pharmacy affect your inventory work?
   - What do you exchange with them?
   - How do you exchange it?
10. **[Optional]** Which tasks vary with the time of year or other circumstances?
    - What changes when that happens?

Section 4: Walkthrough of a critical task (25 min)

Spoken text: “Next, I’d like to go through one task in detail. Please choose the task that is most critical in your

view, and describe the last time you performed it."

Interviewer note: Let her choose the task. Ask about what she actually did, not the official procedure. If possible, ask her to show you the task at her workplace, without displaying any patient data.

11. **[Required]** Which inventory task is most critical in your view?
    - What makes this task critical?
12. **[Required]** What triggered this task the last time you performed it?
    - What information did you have at that point?
13. **[Required]** What did you do, step by step?
    - What did you do next?
    - What information or tools did you use in this step?
    - Who else was involved in this step?
14. **[Required]** How did you know the task was finished?
    - What happened to the result afterward?
15. **[Optional]** When does this task differ from what you just described?
    - What do you do differently in those cases?

Break (5 min)

Spoken text: "Let's take a five-minute break here."

Section 5: Problems and consequences (20 min)

Spoken text: "Welcome back. Now I'd like to talk about what makes your work difficult. Please refer to specific situations where you can."

16. **[Required]** What makes your inventory work difficult?
    - Can you describe a recent example?
    - How often does this happen?
17. **[Required]** What consequences did this problem have?
    - Who else was affected?
    - What consequences did it have for customers? *(If she has not already covered them.)*
18. **[Required]** How do you deal with this problem today?
    - How well does this work?
    - What extra effort does it require?

19. **[Required]** Which of the problems you've named is the most significant?
    - Why is that one the most significant?
20. **[Optional]** What worries you when you think about the inventory?
    - What situation have you experienced that caused this concern?

Section 6: Working environment and resources (10 min)

Spoken text: "Let's look at the conditions you work under and what you have available."

21. **[Required]** How would you describe the environment in which you do your inventory work?
    - How does this environment affect your work?
22. **[Required]** Which resources do you use for your inventory work?
    - Which of them do you rely on most?
    - Which resources do you lack?
23. **[Required]** Which rules or requirements affect your inventory work?
    - How do they affect your work in practice?
24. **[Optional]** How did you learn to do this work?
    - What was difficult to learn?

Section 7: The ideal system (10 min)

Spoken text: "Finally, let's set aside today's constraints for a moment."

Interviewer note: Treat any features she mentions as clues to underlying problems, not as requirements. Do not comment on whether they are feasible.

25. **[Required]** If you could design the ideal inventory system for your work, what would it be like?
    - Which problem would that solve?
    - How would your working day change as a result?

Closing

Section 8: Wrap-up and next steps (10 min)

Spoken text: "Thank you, that was very helpful. Let me briefly summarize what I took away. [Summarize role,

goals, critical task, and most significant problem.] Please correct me if I've misunderstood anything."

26. **[Required]** What should I correct or add to this summary?
    - *If she makes a correction:* What would be the accurate description?
27. **[Required]** What haven't I asked that you consider important?
    - Why is that important to you?
28. **[Optional]** Who else should I talk to about this topic?
    - What could that person add?
29. **[Required]** May I contact you if I have any further questions?
30. **[Required]** Would you like to review my written summary of this interview?

Closing text: "I'll send you the summary by [date] via [channel]. The next step will be [next step]. Thank you very much for your time, Miss Small."

Before you use the script

- **Current or new system:** You didn't say whether the system already exists or is being planned, so the questions work for both. If there is a current system, add its name and ask how it supports the critical task.
- **Placeholders:** Fill in the items in square brackets, as these details weren't provided.
- **Time:** If you start running short, skip the optional questions first. Don't cut Sections 4 and 5, as they are likely to yield the most useful information.

Goal Confirmation Interview

Role

You are an expert in requirements elicitation, supporting a requirements engineer who prepares a stakeholder interview for the given system.

Goal

Create an **Interview Script** for a goal confirmation interview that verifies, updates, or dismisses previously collected goals, finds missing ones, and agrees on the main goals, consisting of:

- The **objective** and verifiable **completion criteria**.
- The **previously collected goals**, numbered.
- **Sections** in interview order, each in one **phase** - **Opening**, **Main**, or **Closing** - with a **name**, a **duration** in minutes, and, if needed, a **spoken text** read out at its start and an **interviewer note**.
- **Questions**, numbered across sections, each **Required** or **Optional**, with **follow-ups**, if needed their **condition**, and the **goals** checked.

Instructions

1. **Phrase questions openly**: Do not suggest an answer, and ask one thing per question. Only organizational and decision questions may be closed.
2. **Take the goals from the documents**: Keep them close to their wording, and invent none. If there are several goal lists, say which one you confirm.
3. **Set the context**: Start the main part with a short context from the documents only, then present the goals and let the interviewee confirm their understanding.
4. **Check each goal**: Give every goal its own required question, followed by: why it matters, whether it is a goal or a solution, the decision - confirm, reword, merge, split, or dismiss - and, unless dismissed, how to measure it.
5. **Complete and prioritize**: Then ask for missing, overlapping, and conflicting goals. In the closing, let the interviewee prioritize and agree on the main goals, and read them back.
6. **Stay factual**: Use placeholders for unknown names. If the time is too short for all goals, plan the time they need, say so, and suggest a second interview.
7. **State missing input**: If the system, the interviewee, or the documents with the goals are missing, say so

instead of creating the script.

Input

Ask the user for the system, its domain, the interviewee's name or role and expertise, the organization, the documents with the goals, the number of main goals to agree on, and the available time before proceeding.

Output

Markdown

Before I create the script, please provide the following:

Required

- **System:** Which system is the interview about?
- **Interviewee:** What are their name or role and expertise?
- **Documents with the goals:** Please attach or paste them. If they contain several goal lists, tell me which one to confirm.

Also needed (I'll use placeholders or flag any gaps if unknown)

- **Domain:** Which domain does the system belong to?
- **Organization:** Which organization is the interview for?
- **Number of main goals:** How many should you agree on?
- **Available time:** How many minutes do you have? If that's too short for all goals, I'll plan the time they need and suggest a second interview.

- Inventory management system

  Miss Small /

  Commercial-technical assistant

  Core inventory management goals

  Ensure product availability: Required medicines are available, so customers wait or return less often.

Optimize stock levels: Little capital is tied up, without causing more stockouts.

Avoid expired stock: Goods nearing expiry are identified in time and, where possible, still sold or returned.

Make use of purchasing terms: Discounts, direct orders, and wholesale terms are used effectively.

Catch shortages early: Supply shortages are identified in time to leave room for finding alternatives.

Workflow goals

Reduce routine work: Orders, goods receipt, and returns take less time and manual effort.

Avoid errors: Stock in the system matches stock on the shelf, and discrepancies are spotted early.

Meet requirements easily: Documentation duties, such as those for narcotics or refrigerated goods, can be met reliably without extra effort.

Create transparency: Stock levels, open orders, and delivery dates are visible at a glance.

Personal goals

- Work without disruption: complete my work reliably despite interruptions in the daily pharmacy routine.

Handle fewer queries: Colleagues at the counter can find information such as delivery dates or stock levels themselves.

Reduce dependence on individual knowledge: Knowledge isn't held only in her head, so cover works during vacation or sick leave.

Pharmacy

My-Pharmacy

8 main goals

120min

Interview Script: Inventory Management System

Interview with Miss Small, commercial-technical assistant at My-Pharmacy, to agree on 8 main goals in a total of 120 minutes.

Objective

Verify, update, or dismiss the 12 previously collected goals for the inventory management system, identify missing goals, and agree on the 8 main goals with Miss Small.

Completion Criteria

- Each of the 12 goals has a documented decision: confirmed, reworded, merged, split, or dismissed.
- Each goal that was not dismissed has a stated importance and at least one way to measure it.
- Each goal has been classified as a goal or a solution.
- Missing, overlapping, and conflicting goals have been asked about and any findings documented.
- 8 main goals have been agreed on, ranked, and read back to Miss Small.

Previously Collected Goals

ID	Goal
G 1	Ensure product availability: Required medicines are available, so customers wait or return less often.
G 2	Optimize stock levels: Little capital is tied up, without causing more stockouts.
G 3	Avoid expired stock: Goods nearing expiry are identified in time and, where possible, still sold or returned.
G 4	Make use of purchasing terms: Discounts, direct

	orders, and wholesale terms are used effectively.
G 5	Catch shortages early: Supply shortages are identified in time to leave room for finding alternatives.
G 6	Reduce routine work: Orders, goods receipt, and returns take less time and manual effort.
G 7	Avoid errors: Stock in the system matches stock on the shelf, and discrepancies are spotted early.
G 8	Meet requirements easily: Documentation duties, such as those for narcotics or refrigerated goods, can be met reliably without extra effort.
G 9	Create transparency: Stock levels, open orders, and delivery dates are visible at a glance.
G 10	Work without disruption: She can complete her work reliably despite interruptions in the daily pharmacy routine.
G 11	Handle fewer queries: Colleagues at the counter can find information such as delivery dates or stock levels themselves.

G 12	Reduce dependence on individual knowledge: Knowledge isn't held only in her head, so cover works during vacation or sick leave.

Welcome and Introduction (Opening, 5 min)

> Hello Miss Small, and thank you for taking the time today. My name is [interviewer name]. Today we will review the goals collected so far for the inventory management system at My-Pharmacy. We will check each goal, look for anything missing, and finally agree on the 8 main goals. We have 120 minutes.

- **Q 1** (Required): Are you comfortable with me taking notes during the interview?
- **Q 2** (Required): What are your tasks in inventory management at My-Pharmacy?

Context and Goal Overview (Main, 8 min)

> This interview concerns the inventory management system in a pharmacy. The goals collected so far fall into three groups: core inventory management goals, workflow goals, and personal goals. I will now go through all 12 goals briefly.

Present G 1 to G 12 in their documented wording, ideally on a printout that Miss Small can keep in front of her. Do not discuss individual goals yet.

- **Q 3** (Required; goals: G 1, G 2, G 3, G 4, G 5, G 6, G 7, G 8, G 9, G 10, G 11, G 12): How would you summarize these goals in your own words?
- **Q 4** (Required; goals: G 1, G 2, G 3, G 4, G 5, G 6, G 7, G 8, G 9, G 10, G 11, G 12): Which wording is unclear to

you?

- If any wording is unclear: What would you need to know to understand it?

Core Inventory Management Goals (Main, 35 min)

Plan about 7 minutes per goal. Record the decision and the measure for every goal. If you fall behind, shorten the discussion, but still ask for the decision and the measure.

- **Q 5** (Required; goals: G 1): What does "required medicines are available" mean in your daily work?
  - Why does this goal matter to you?
  - Is this a goal in itself or a solution for reaching another goal?
  - If it is a solution: What goal is behind it?
  - Do you want to confirm, reword, merge, split, or dismiss this goal?
  - If reworded, merged, or split: What should the new wording be?
  - If not dismissed: How would you measure whether this goal has been achieved?
- **Q 6** (Required; goals: G 2): What does "little capital is tied up, without causing more stockouts" mean for your handling of stock?
  - Why does this goal matter to you?
  - Is this a goal in itself or a solution for reaching another goal?
  - If it is a solution: What goal is behind it?
  - Do you want to confirm, reword, merge, split, or dismiss this goal?
  - If reworded, merged, or split: What should the new wording be?
  - If not dismissed: How would you measure whether this goal has been achieved?
- **Q 7** (Required; goals: G 3): What does "identified in time" mean to you for goods nearing expiry?
  - Why does this goal matter to you?
  - Is this a goal in itself or a solution for reaching another goal?

- If it is a solution: What goal is behind it?
- Do you want to confirm, reword, merge, split, or dismiss this goal?
- If reworded, merged, or split: What should the new wording be?
- If not dismissed: How would you measure whether this goal has been achieved?

- **Q 8** (Required; goals: G 4): What does using discounts, direct orders, and wholesale terms "effectively" mean to you?
  - Why does this goal matter to you?
  - Is this a goal in itself or a solution for reaching another goal?
  - If it is a solution: What goal is behind it?
  - Do you want to confirm, reword, merge, split, or dismiss this goal?
  - If reworded, merged, or split: What should the new wording be?
  - If not dismissed: How would you measure whether this goal has been achieved?
- **Q 9** (Required; goals: G 5): What does "identified in time" mean to you for supply shortages?
  - Why does this goal matter to you?
  - Is this a goal in itself or a solution for reaching another goal?
  - If it is a solution: What goal is behind it?
  - Do you want to confirm, reword, merge, split, or dismiss this goal?
  - If reworded, merged, or split: What should the new wording be?
  - If not dismissed: How would you measure whether this goal has been achieved?

Workflow Goals (Main, 28 min)

Plan about 7 minutes per goal.

- **Q 10** (Required; goals: G 6): Which parts of orders, goods receipt, and returns does this goal concern most in your work?

    - Why does this goal matter to you?
    - Is this a goal in itself or a solution for reaching another goal?
    - If it is a solution: What goal is behind it?
    - Do you want to confirm, reword, merge, split, or dismiss this goal?
    - If reworded, merged, or split: What should the new wording be?
    - If not dismissed: How would you measure whether this goal has been achieved?
- **Q 11** (Required; goals: G 7): What does "discrepancies are spotted early" mean to you?
    - Why does this goal matter to you?
    - Is this a goal in itself or a solution for reaching another goal?
    - If it is a solution: What goal is behind it?
    - Do you want to confirm, reword, merge, split, or dismiss this goal?
    - If reworded, merged, or split: What should the new wording be?
    - If not dismissed: How would you measure whether this goal has been achieved?
- **Q 12** (Required; goals: G 8): What does "met reliably without extra effort" mean to you for documentation duties?
    - Why does this goal matter to you?
    - Is this a goal in itself or a solution for reaching another goal?
    - If it is a solution: What goal is behind it?
    - Do you want to confirm, reword, merge, split, or dismiss this goal?
    - If reworded, merged, or split: What should the new wording be?
    - If not dismissed: How would you measure whether this goal has been achieved?
- **Q 13** (Required; goals: G 9): What does "visible at a glance" mean to you for stock levels, open orders, and delivery dates?

- Why does this goal matter to you?
- Is this a goal in itself or a solution for reaching another goal?
- If it is a solution: What goal is behind it?
- Do you want to confirm, reword, merge, split, or dismiss this goal?
- If reworded, merged, or split: What should the new wording be?
- If not dismissed: How would you measure whether this goal has been achieved?

Personal Goals (Main, 21 min)

Plan about 7 minutes per goal. First clarify whether "she" and "her" in G 10 and G 12 refer to Miss Small. If they do not, ask whose goals they are and document the answer.

- **Q 14** (Required; goals: G 10): What does completing your work reliably despite interruptions mean to you?
  - Why does this goal matter to you?
  - Is this a goal in itself or a solution for reaching another goal?
  - If it is a solution: What goal is behind it?
  - Do you want to confirm, reword, merge, split, or dismiss this goal?
  - If reworded, merged, or split: What should the new wording be?
  - If not dismissed: How would you measure whether this goal has been achieved?
- **Q 15** (Required; goals: G 11): What information should colleagues at the counter be able to find themselves?
  - Why does this goal matter to you?
  - Is this a goal in itself or a solution for reaching another goal?
  - If it is a solution: What goal is behind it?
  - Do you want to confirm, reword, merge, split, or dismiss this goal?
  - If reworded, merged, or split: What should the new wording be?

- If not dismissed: How would you measure whether this goal has been achieved?

- **Q 16** (Required; goals: G 12): What does "cover works during vacation or sick leave" mean to you?
  - Why does this goal matter to you?
  - Is this a goal in itself or a solution for reaching another goal?
  - If it is a solution: What goal is behind it?
  - Do you want to confirm, reword, merge, split, or dismiss this goal?
  - If reworded, merged, or split: What should the new wording be?
  - If not dismissed: How would you measure whether this goal has been achieved?

Missing, Overlapping, and Conflicting Goals (Main, 10 min)

> We have now gone through all 12 goals. Next, let's look at the list as a whole.

- **Q 17** (Required; goals: G 1, G 2, G 3, G 4, G 5, G 6, G 7, G 8, G 9, G 10, G 11, G 12): Which goals are missing from this list?
  - If a goal is missing: Why does this goal matter to you?
  - If a goal is missing: How would you measure whether this goal has been achieved?
- **Q 18** (Required; goals: G 1, G 2, G 3, G 4, G 5, G 6, G 7, G 8, G 9, G 10, G 11, G 12): Which goals overlap?
  - If goals overlap: How should these goals be separated or combined?
- **Q 19** (Required; goals: G 1, G 2, G 3, G 4, G 5, G 6, G 7, G 8, G 9, G 10, G 11, G 12): Which goals conflict with each other?
  - If goals conflict: Which goal should take precedence?
  - If goals conflict: Why should this goal take precedence?

Prioritizing and Agreeing on the Main Goals (Closing, 11 min)

> Finally, let's agree on the main goals. Please consider the current list, including any changes and new goals from today.

Show the updated goal list. Write down the selection and ranking so that you can read them back exactly.

- **Q 20** (Required; goals: G 1, G 2, G 3, G 4, G 5, G 6, G 7, G 8, G 9, G 10, G 11, G 12): Which 8 goals are the main goals for you?
  - What was decisive for your selection?
  - If the selection is difficult: Which goal could you most easily leave out?
- **Q 21** (Required): In what order would you rank these 8 main goals?
  - Why did you put your top goal first?
- **Q 22** (Required): I will now read back the 8 main goals in your order. Is this the list we have agreed on?
  - If not: What should be changed?

Thanks and Next Steps (Closing, 2 min)

> Thank you very much, Miss Small, for your time and input. I will document today's decisions, measures, and the 8 main goals, and send you the summary for review by [date]. If anything else occurs to you, you can reach me at [contact details].

Check before the interview

- **Her authority:** G 2 (tied-up capital) and G 4 (purchasing terms) may be decisions for the pharmacy owner. If so, Miss Small can give her view, but she can’t finally agree on those goals. Consider confirming them with the owner as well.

- **Personal goals in the ranking:** G 10 to G 12 compete directly with the business goals for the 8 places. If these should be the pharmacy's main goals rather than hers, say so when you introduce Q 20.
- **Likely overlaps and conflicts:** G 9 and G 11 may overlap, and G 1 and G 2 may conflict. G 2 also already includes part of G 1 ("without causing more stockouts"). I left these out of the script so they don't steer her answers, so listen for them in Q 18 and Q 19.
